

# Please read before assembling

Thank you for purchasing a Squape X[dream]. For technical reasons and because the device is delivered dry, you have to do a quick assembly before using it.

## Step 1:

This is the Squape X[dream]. By default it is delivered with the 3-mode-lock in „remove“-mode.

Three modes:

- Left: „vape“ (click sound)
- Middle: „remove“
- Right: „closed“ (click sound)

Please follow the steps before assembling the base. As soon as you are done you might screw the X on a battery mod to get a better handling.

## Step 2:

This is your base incl. deck and poles:  
Lubricate the o-ring with VG or high-VG juice.

Notch

## Step 3:

This is your closing ring. Lubricate the notch above the airholes. Place this ring on top of your deck.  
(See next picture)

## Step 4:

Your base, deck and ring should look like this.

## Step 5:

Push the base into the tank section. You will find the correct position by turning the base left or right. As soon as the base is in place, turn it left and right again, then back to the „remove“-position. The ring is now in place and won't come off after removing the tank from the base. The Squape X[dream] is ready for use.

Vape the **SQuape**<sup>®</sup> X [dream]
